

5 ENERGY SAVING TIPS FOR YOUR WASHING MACHINE

by Repair Aid

Check out our energy saving tips to help you lower your bills.

1. AVOID HALF-LOADS

Wait for a full load. Two half-loads will use more energy than a single full load.

2. MODERN MACHINE

Older washing machine will consume more energy than a new one. Consider replacing older models with more energy efficient versions. If you're buying a new washing machine, consider a front loader instead of a top loader.

3. COLD WASHES

As 80% of the energy used by the washing machine goes toward heating the water, washing machines use a lot less energy on the cold wash cycle.

4. MAINTENANCE

Washing machines require regular maintenance to keep them in tip-top condition and working at their best.

5. USAGE

Reduce your weekly loads and wash your clothes during off-peak times.
